

# Programming Technologies - Second Practical Work

Maria João Varanda

25th March 2024

## Introduction

As second practical work the proposal is to implement a parser and a translator from ClassDG to Mermaid language. ClassDG is a domain specific language created by you in the first practical work and is used to describe textually class diagrams. The idea is to receive a valid ClassDG specification and generate a diagram specification built and visualized in Mermaid (<https://mermaid.live/>).

This work (individual or in group of two students) must be delivered at 26th April 2024 uploading a zip file with a commented ply code file, the input text and the produced output.
